

Docent Security Policy and Compliance

1. Data Encryption Standards

Docent enforces AES-256 encryption at rest for all stored vector embeddings and document metadata in ChromaDB. All API communications between clients and the Docent service must use TLS 1.3 encryption in transit.

2. Security Audit Schedule

Security audits for Docent instances are conducted bi-annually every June and December by an independent third-party cybersecurity firm. Audit reports are retained for exactly 7 years.

3. Incident Response SLA

Critical security incidents must be acknowledged by the incident response team within 15 minutes of detection. A full mitigation plan and root cause analysis must be delivered within 2 hours.
